

Del.icio.us

allanahk@hotmail.com

1. Find www.del.icio.us

2. Make up a user name and password. Write it down so you remember it.

» sign up now

username	<input type="text" value="Allanahk"/>
password	<input type="password" value="*****"/>
password again	<input type="password" value="*****"/>
email	<input type="text" value="Allanahk@hotm"/>

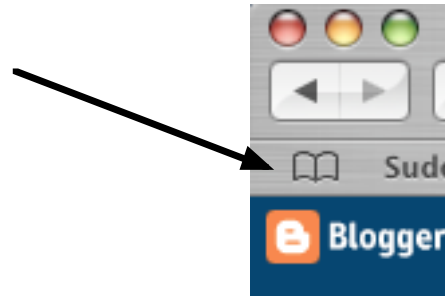

3. They will send you email verification. Do it.

4. Drag the **POST to del.icio.us** and **MY Delicious** into the bookmarks bar.

If on a PC you will have to download a tiny programme that puts the links into your links bar.

To make things simpler and take up less space I have renamed the links to **POST** and **MINE**. On an Apple you go like this but on a PC you go like that!

5. As you find a site that you like that you want to share click on **POST** and it cunningly enters it into **del.icio.us**.

Make a tag for it to group it with others.

Click on save.

6. Click on **MY DELCIOUS** to see what you have saved and to see what others have saved.
7. Share or search your on-line bookmarks with others! See what others who share your interests are also bookmarking.
8. Take note though that others can see what you have saved as bookmarks so if you wanted to keep things like a blog URL private then I would suggest that you didn't list it or go to settings and allow private bookmarks.
